

Safety SHUT-OFF Valve HON 711

PRODUCT INFORMATION

**Serving the Gas Industry
Worldwide**

Honeywell

Safety Shut-Off Valve HON 711

Applications, characteristics, technical data

Applications

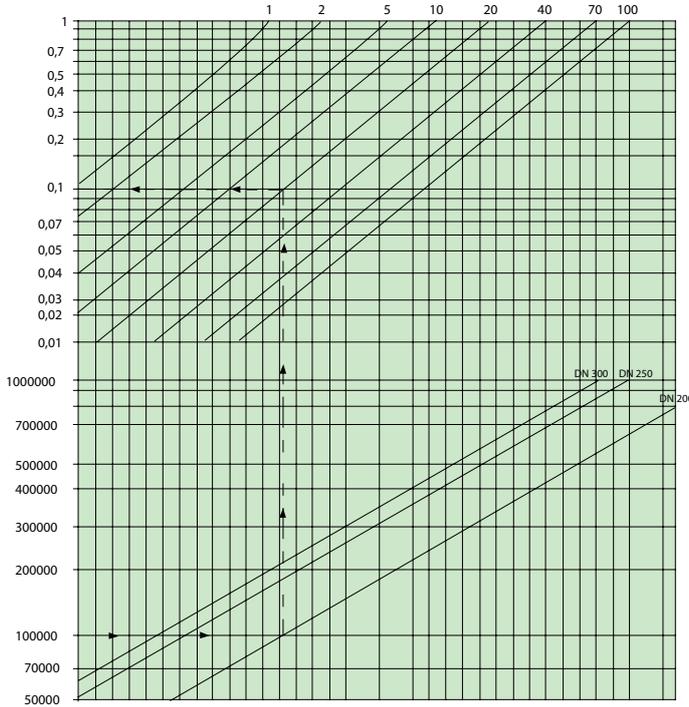

- Safety device in gas pressure regulating stations
- Applicable for use with natural gas according to DVGW G 260; other gases available upon request

Characteristics

- Maintenance-friendly, interior parts accessible without device removal, made up of few parts
- Integrated pressure equalisation valve
- Low pressure loss thanks to axial flow
- Standard design with manual release
- Electrical release and electrical position indicator possible
- High activation accuracy and short response time
- The maximum flow speed should not exceed 80 m/s
- Version available in accordance with SIL standard IEC61508

TECHNICAL DATA																					
Max. operating pressure PS_{max}	100 bar (depending on flange version)																				
Nominal width	DN 25, DN 50, DN 80, DN 100, DN 150, DN 200, DN 250, DN 300																				
Type of connection	DIN flange PN 25, PN 40 and flange according to ANSI 300, 600 RF, RTJ, 900 RTJ (PS = 130bar) on request																				
Material	<table border="0"> <tr> <td>Main valve</td> <td>A 352 LCC / G20Mn5 QT</td> </tr> <tr> <td>Switching device</td> <td>Aluminium alloy</td> </tr> <tr> <td>Control device</td> <td>Aluminium alloy</td> </tr> <tr> <td>Internal parts</td> <td>Al, Niro, brass, steel</td> </tr> <tr> <td>O-rings</td> <td>NBR, other materials on request</td> </tr> <tr> <td>Closing spring</td> <td>Steel</td> </tr> </table>	Main valve	A 352 LCC / G20Mn5 QT	Switching device	Aluminium alloy	Control device	Aluminium alloy	Internal parts	Al, Niro, brass, steel	O-rings	NBR, other materials on request	Closing spring	Steel								
Main valve	A 352 LCC / G20Mn5 QT																				
Switching device	Aluminium alloy																				
Control device	Aluminium alloy																				
Internal parts	Al, Niro, brass, steel																				
O-rings	NBR, other materials on request																				
Closing spring	Steel																				
Temperature range class 2/Function class	-20 to +60°C (Other temperature ranges on enquiry) Function class A																				
Response time t_a	<p>≤ 0.5 s (The response time depends on the operating pressure, the main valve nominal width and the control device)</p> <p>DN 25–DN 150: 0.1–0.3 sec DN 200–DN 300: 0.1–0.5 sec</p>																				
Function and strength	DIN EN 14382																				
Explosion protection	Since the device is not fitted with potential ignition sources of its own, it is not subject to ATEX 95 regulations (use electronic accessories used satisfy ATEX requirements).																				
CE mark in accordance with PED	 CE mark in accordance with PED DVGW/GOST/GOSTTECHNADSOR																				
Pressure drop Δp	<p>calculated as follows: $\Delta p \approx \frac{Q_n^2}{p_u \cdot K_G^2}$</p> <p>$Q_n$ [m³/h]: Volume flow under standard conditions P_u [bar]: Inlet pressure</p>																				
	<table border="1"> <thead> <tr> <th colspan="2">Valve flow rate coefficient K_G^*</th> </tr> <tr> <th>Nominal width DN</th> <th>K_G value in (m³/h)/bar</th> </tr> </thead> <tbody> <tr> <td>25</td> <td>1200</td> </tr> <tr> <td>50</td> <td>4790</td> </tr> <tr> <td>80</td> <td>12260</td> </tr> <tr> <td>100</td> <td>19160</td> </tr> <tr> <td>150</td> <td>43110</td> </tr> <tr> <td>200</td> <td>76650</td> </tr> <tr> <td>250</td> <td>119750</td> </tr> <tr> <td>300</td> <td>130400</td> </tr> </tbody> </table>	Valve flow rate coefficient K_G^*		Nominal width DN	K_G value in (m³/h)/bar	25	1200	50	4790	80	12260	100	19160	150	43110	200	76650	250	119750	300	130400
Valve flow rate coefficient K_G^*																					
Nominal width DN	K_G value in (m³/h)/bar																				
25	1200																				
50	4790																				
80	12260																				
100	19160																				
150	43110																				
200	76650																				
250	119750																				
300	130400																				

Pressure drop depending on the flow rate with different inlet pressures and nominal widths

The diagram applies for natural gas. Conversion to the equivalent natural gas flow must take place first for other gases.

$$q_n \text{ Natural gas} = \frac{q_n \text{ Gas}}{f} \quad [\text{m}^3/\text{h}]$$

Example:

Assumptions:
 $q_n = 100000 \text{ m}^3/\text{h}$ (natural gas)
 $p_U = 20 \text{ bar}$
 DN 200

Results:
 Pressure drop 90 mbar

-  Atmosphere

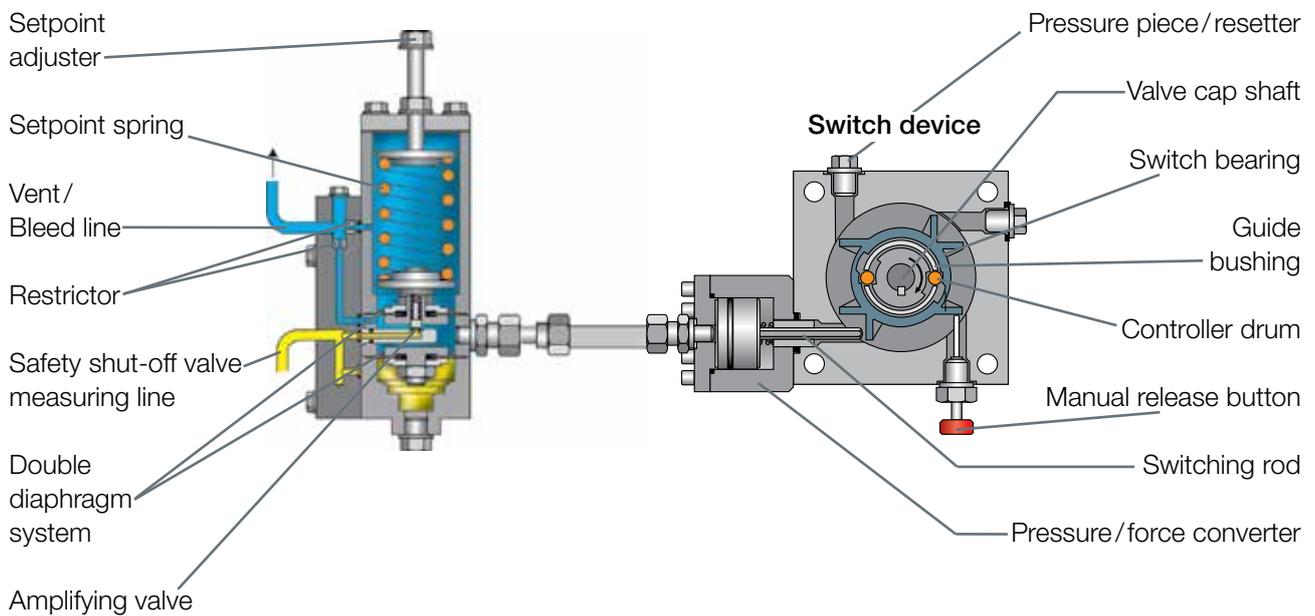

Safety Shut-Off Valve HON 711

Construction and mode of operation

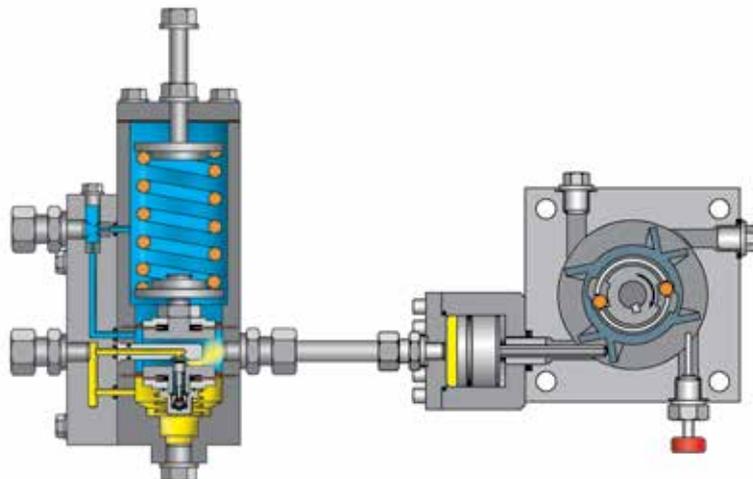

Mode of operation with control devices K16, K17, K18, K19

The pressure to be monitored (operating pressure) is applied on the double diaphragm system and is compared with the setpoint specified by the setpoint springs (response setpoint). If the upper response pressure is reached with control device K16 or K18 (overpressure) or the lower response pressure is reached with K17/K19, the amplifier valve opens. Gas flows out of the system to be monitored to the force/pressure converter. The pressure accumulating there slides the piston towards the switching devices and causes a release of the locking device of the valve flap shaft. The springs of the actuator close the SSV.

6 Actuator (K16 for upper setting range)

Control device in released state (K17 for lower setting range)

Mode of operation with control device K10a, K11a

The control device is a release mechanism with diaphragm measuring unit and/or piston measuring unit (K10a/K11a), which is held in position by the setpoint springs. The two setpoints (release pressure setpoints) for overpressure and underpressure can be adjusted with the control devices K10a and K11a without influencing each other. If the upper or lower release pressure is reached, the release movement in the control device is transferred over the switching rod to the switching bearing of the switching device. In the process, the locking device of the valve flap shaft is released and the SSV valve flap interrupts the gas flow.

Mode of operation with solenoid (electrical release)

Closing in case of current failure:

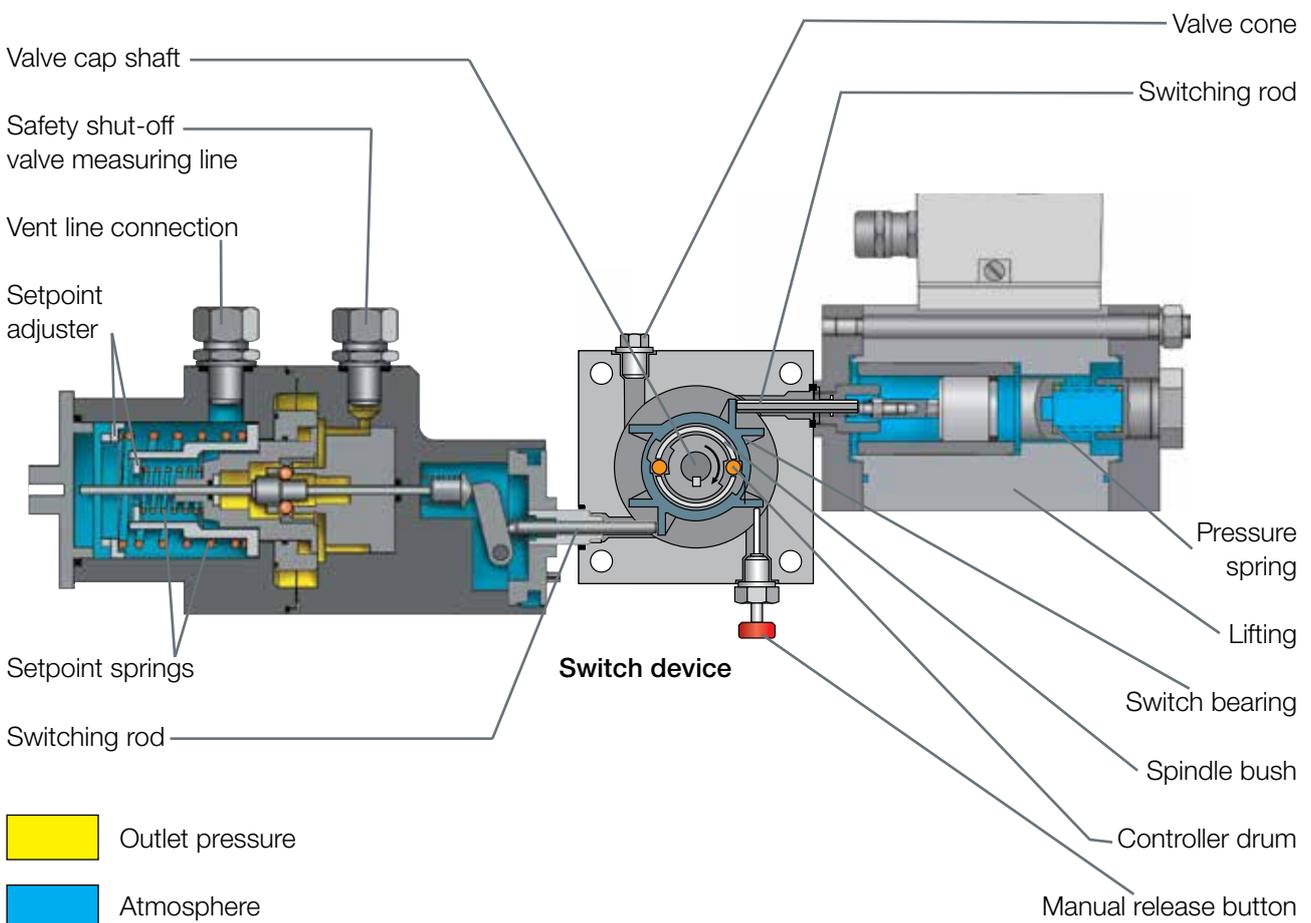

With the lifting movement of the magnet, the pressure spring in the magnet is pre-tensioned. If the current circuit is interrupted, the switching rod is moved suddenly towards the switching device by means of the spring pressure and triggers the closing process.

Closing with application of current:

The lifting movement of the magnet unlocks the release mechanism in the switching device via the switching rod and the SSV closes.

**Pneumatic release with control device
(K 11a/2 for upper and lower setting range)**

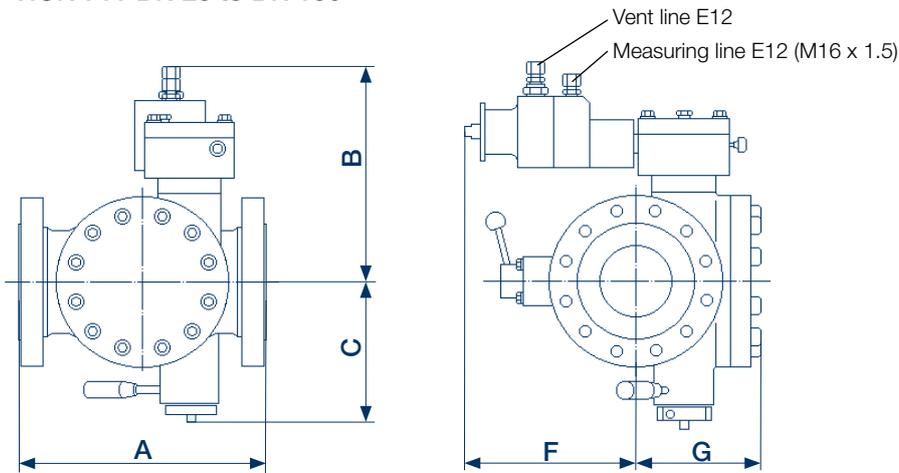

**Electrical release with lifting magnet
(Closing in case of current failure)**
