4.3.3	Parts for maintenance purposes	19

## 1. General information

All persons involved with the assembly, operation and/or maintenance of the HON 512 gas pressure regulator must read and understand all of the following documents:

- Technical product information 512.00 – it contains the equipment's technical data and dimensions as well as instructions concerning set-up and mode of operation.
- General operating manual for gas pressure regulators and safety devices – this Honeywell document contains information on assembly and operation as well as general information on troubleshooting.
- Operating and maintenance instructions / spare parts 512.20 – this document contains more detailed information on assembly and operation of the HON 512 gas pressure regulator.
- The various components and units are described in separate booklets "Operating and Maintenance Instructions, spare parts":

Pilot:	HON 650	650.20
Filter	HON 905	905.20
Distance sensor	HON 970	970.20

There are national laws and regulations for all sorts of jobs on gas pressure governors, from planning to maintenance. Be sure to comply. (In Germany, for instance, DVGW work sheets G 600, G 459/II, G 491 and G 495.)

Inspection and maintenance intervals depend mostly on operating conditions and the nature and properties of the gas. There are no general rules or recommendations for intervals. For Germany, we recommend to consider maintenance intervals as stated in DVGW work sheet G 495 in a first instance. However, in the mid-term, intervals must be adapted to the requirements of each specific equipment.

During maintenance, components must be cleaned and then checked thoroughly. This is necessary even if there have not been any unusual observations during operation and/or functional testing. Checks must focus, in particular, on diaphragms and seals and all movable parts and their respective bearings. Any and all defective parts must be replaced with new ones. The same applies to O rings removed during disassembly.

Item numbers mentioned in the specific operating and maintenance instructions correspond with the numbers in the spare parts lists and drawings.

Some parts in the lists and drawings are marked with a letter "W". We recommend to always have a reserve of those parts in stock for maintenance purposes. Those spare parts are put together in another separate list at the end of the spare parts list.

### 1.1 Safety information

In this manual, safety information is highlighted by means of the following titles and eye catchers:

Eye catcher	used for:
	danger to life and limb
	danger of damage to property and/or the environment
	important additional information

### 3. Specific maintenance instructions

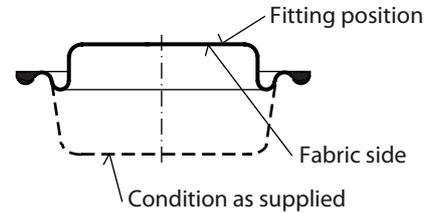

**Danger**

Before disassembly, chambers filled with gas must be evacuated.

#### 3.1 for HON 512b and HON 512c

- Roll diaphragm (31/131)  
Grease roll of roll diaphragm slightly over. Position for fitting as shown in drawing. Push over diaphragm disk (11/111). The fabric side (marked with a stamp) must be toward the diaphragm disk. Push fold of roll between disk and housing (15/115).

**Note**

Do not use pointed tools.

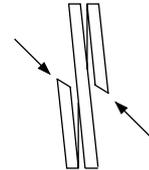

- Grease chambers (45/145)  
Fill grease chambers in front of the two guide rings (46/146) completely with silicone grease (45/145).

#### 3.2 for HON 512b only

- Support ring (43) for DN 25 and DN 50  
Take good note of the position of the wire ends of the support rings.

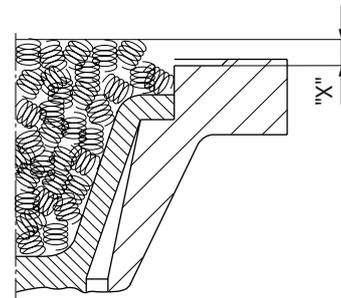

**Note**

The chamfers of the wire ends must be toward each other, as shown in the sketch.

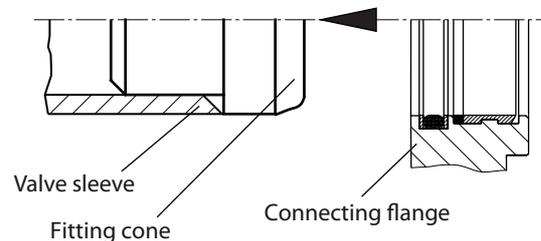

- Coil (99) for device with outlet expansion piece  
The sound-dampening outlet part usually does not require maintenance. However, if the relief plates (88/89) have been removed from the relief housing (81), it is important to pre-tension the coils (99) before re-assembly. To accomplish that, place coils in relief housing (81) with a certain overmeasure "X" (see table).

Nominal output width	"X" in mm
DN 100	8
DN 150	10
DN 200	12
DN 250	16
DN 300	16

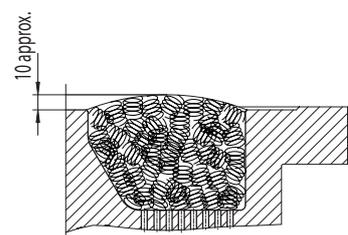

- Device with reverse flow protection  
When pushing connecting flange (34) on to valve sleeve (65), be sure to use a fitting cone to protect the seal and guide elements (43, 44, 46) – see 3.6.

#### 3.3 for HON 512c only

- Valve cone (167) and perforated flow restrictor (171).  
Assemble and disassemble using a temporary bolt (see 3.6).
- Coil (199) for DN 250/500 and DN 250/600  
The sound-dampening outlet part usually does not require maintenance. However, if the relief plates (188/189) have been removed from the relief housing (181), it is important to pre-tension the coils (199) before re-assembly. To accomplish that, place coils in relief housing (181) with 10 mm overmeasure.

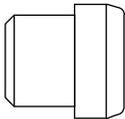

### 3.4 Tightening torques MA in Nm

Item no.	Nominal width									
	25/25	25/100	25/150	50/50	50/150	50/200	80/80	80/250	100/100	100/300
