4.4.2 Spare parts list - accessories	20
4.5 Parts for maintenance purposes	21

1. General information

All persons involved with the assembly, operation and/or maintenance of safety shut-off valve HON 711 must read and understand all of the following documents:

- Technical product information 711.01 — this Honeywell document contains the technical data and dimensions of the equipment as well as instructions concerning construction and mode of operation.
- General operating manual for gas pressure regulators and safety devices – this Honeywell document contains information on assembly and operation as well as general information on troubleshooting.
- Operating and maintenance instructions, spare parts 711.21 – this Honeywell document contains more details concerning installation and operation of safety shut-off valve HON 711. Furthermore it contains the maintenance instructions and spare parts drawings and lists of the main valve.
- The various components and units are described in separate booklets "Operating and Maintenance Instructions, spare parts":

Control unit	K 10a, K 11a/1, K 11a/2	672.20
Control unit	K 16, K 17, K 18, K 19	670.20
Sensing valve	HON 910a	910.20

There are national laws and regulations for all sorts of jobs on gas pressure governors, from planning to maintenance. Be sure to comply. (In Germany, for instance, DVGW work sheets G 600, G 459/II, G 491 and G 495.)

Inspection and maintenance intervals depend mostly on operating conditions and the nature and properties of the gas. There are no general rules or recommendations for intervals. For Germany, we recommend to consider maintenance intervals as stated in DVGW work sheet G 495 in a first instance. However, in the mid-term, intervals must be adapted to the requirements of each specific equipment.

During maintenance, components must be cleaned and then checked thoroughly. This is necessary even if there have not been any unusual observations during operation and/or functional testing. Checks must focus, in particular, on diaphragms and seals and all movable parts and their respective bearings. Any and all defective parts must be replaced with new ones. The same applies to O rings removed during disassembly.

Item numbers mentioned in the specific operating and maintenance instructions correspond with the numbers in the spare parts lists and drawings.

Some parts in the lists and drawings are marked with a letter "W". We recommend to always have a reserve of those parts in stock for maintenance purposes. Those spare parts are put together in another separate list at the end of the spare parts list.

1.1 Safety information

In this manual, safety information is highlighted by means of the following titles and eye catchers:

Eye catcher	Used for:
 Danger	Danger to life and limb
 Caution	Danger of damage to property and/or the environment
Note	Important additional information

2. Specific operating instructions

2.1 Opening the safety shut-off valve (SSV).

- Before you can open the SSV actuator, compensate pressure in the bypass line by actuating the sensing valve and
- The switching device may be engaged by pulling the T handle (160) up as far as it will go.

Note

The switching devices of control units 10a and K 11a cannot engage unless the control unit has been engaged first.

- Engage control units K 10a and K 11a by pulling on the switching rod.
To do that, unscrew the sealing cap, turn it around and put it back on the switching rod (see 672.20).

Note

Control units K 10a and K 11a work on the principle of underpressure shut-off.
They can be engaged only if the pressure at the measuring point corresponds to the operating pressure.

2.2 Actuation tests with control units 10a and K 11a

Caution

Actuation tests must not be carried out unless the control unit has been mounted on the switching device and the latter has been mounted on the actuator. Otherwise, mechanical damage might occur.

- Engage the hand wheel on the actuator housing by turning it in the direction of the device.
- Turn the hand wheel in the direction of the arrow until the valve flap engages in its open position.

Note

The hand wheel will turn freely when not engaged. The safety coupling is not engaged.

3. Specific maintenance instructions

Danger

Before disassembly, chambers filled with gas must be evacuated.

3.1 Actuator unit

- Coil springs (83)
The coil springs must be checked for corrosion. Replace, if necessary.
Dismantle as follows:

- Close SSV.
- Relax the coil springs (83).
- Remove the hand wheel (33) and both rectangular casings (43, 49).
- Remove the screws (84) from all six coil springs (83).
- Pull every single coil spring (83) to the front and across the bearing block (32) and

Danger

The coil spring is biased.

- O ring (55)
To check the valve sealing (O ring (55)), first remove the valve flap (57). To do that, relax the coil springs (83) (see above) and remove the screws (44).
Lubricate a new O ring (55) and push it into the groove of the valve flap (57) at four points along the circumference. Only then push it completely into the groove.

- Screw locking devices

Make sure all screws and threads of valve flaps are locked properly.

- Valve flap support (359)
- Screws (350)
- Hex screw (44)
- Locking split pin (63)
- Loctite (56)
- Tab washer (45)

- Valve flap lever

Note

The settings of the valve flap lever are device-specific. Therefore, the lever cannot be easily exchanged. If you need a new lever, be sure to talk to Honeywell.

3.2 Switch device

- Dismounting the switchable mount (166)

Remove the valve cone (175) from the switch housing (169). Next, pull the T-handle (160) up until the switchable mount can be taken out.

- Mounting the switchable mount (166)

Proceed as before, but in reverse order. When you push the mount across the balls (165), you must pull up the T-handle (160) again, just as you did during dismounting.

Observe proper fitting position (see spare parts drawing for switching device, p. 14).

Note

The manual release (176) and switching rod of the control unit / solenoid must not touch the switchable mount.

3.3 Tightening torques M_A in Nm

Screws & bolts - item no.	30	44	65	84	133
Tightening torques M_A in Nm	40	180	340	8	40

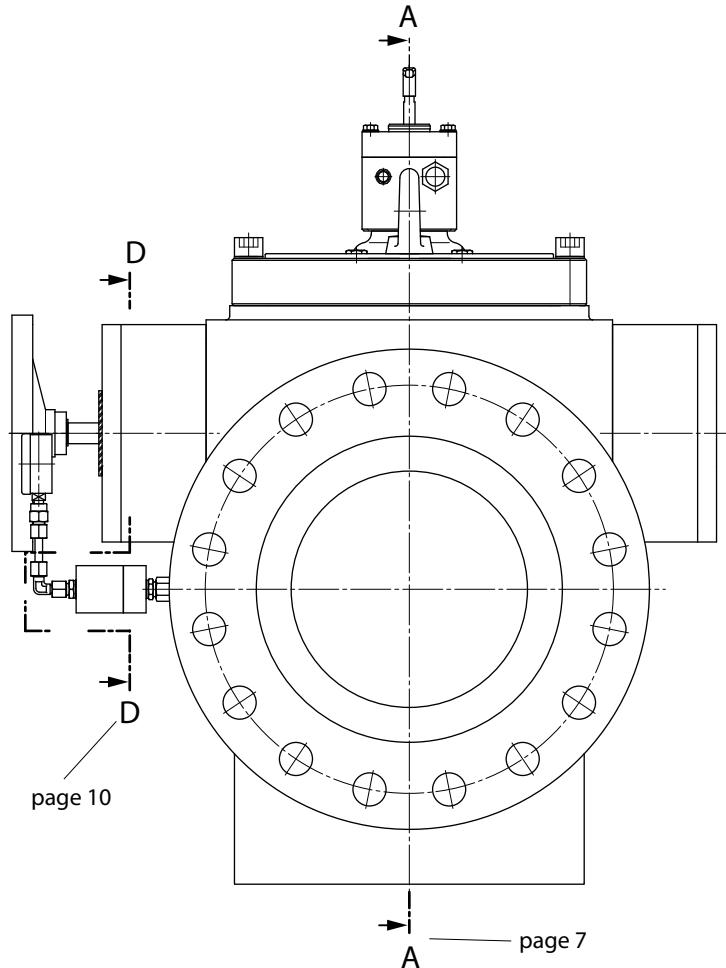

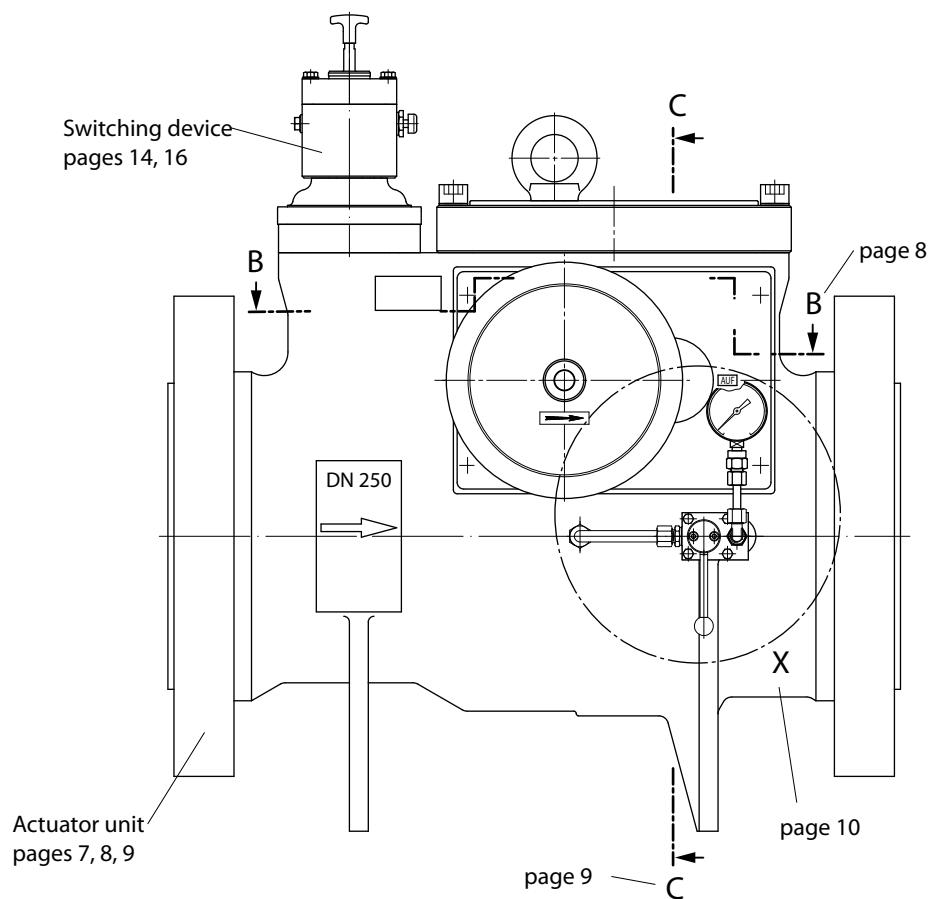

3.4 Lubricants

Components (cover with thin layer)	Lubricant	HON part no.
All O rings, slip guides, slip faces and switching elements	Silicone grease	27 081
Thread of manual release (150)	Assembly paste	27 091
All fastening screws and screwed pipe connections	Assembly grease	27 058

Item no.	Denomination	Number	W	Material	Part no.
1000	Switching rod	1		NSt	10025568
1001	Threaded pin (setscrew)	1		St	8486
1002	Connecting flange	1		LM	10022582
1003	Guide screw	1		NSt	10001811
1004	Pressure spring	1		SF	18355195
1005	Hex nut	1		St	3020
1006	Adjusting nut	1		Ms	1001864
1007	Bushing	1		LM	10022584
1008	O ring	1		KG	20327
1009	Magnet	1			100223
1010	Anchor	1			10030390
1011	Threaded bolt	4		NSt	10022585
1012	Cap	1		LM	10022583
1013	Sealing ring	1		LM	18706
1014	Sealing cap	1		St	26523
1015	Lock washer	4		SF	14113
1016	Hex nut	4		St	5692
1017	Pressure spring	1		SF	28067
1018	Sealing cap	1		Ms	10022586

4.5 Parts for maintenance purposes

Actuator unit

Item no.	Denomination	Number	Part no.		
			DN 200	DN 250	DN 300
20	O ring	2	20818	20818	20818
24	O ring	2	20513	20513	20513
45	Washer	4	19005	19005	19005
55	O ring	1	20973	20819	20819
59	O ring	1	20519	20519	20519
63	Split pin	1	15005	15005	15005
68	O ring	1	20627	10002098	10002098

Switch device

Item no.	Denomination	Number	Part no.
Version ex works no. 060240496			
223	Screwed connection, complete	1	10011487
224	O ring	1	20382
228	Split pin	2	15005
229	Split pin	1	15031
(versions through series # 060240495)			
315	O ring	1	20383
318	O ring	1	20752
326	Sealing ring	1	20434
328	O ring	1	20320
332	O ring	1	20413
337	O ring	1	20382
341	Split pin	2	15005
342	Split pin	1	15031
349	O ring	1	20310
